

Where Did 6th Graders Go to School in 5th Grade?

Feeder Pattern Analysis of DCPS Middle or MS/HS Education Campuses

The table below describes where 6th graders in SY2013-14 attended school the previous school year (SY2012-13). The purpose of the table is to show the elementary schools that "feed" into DCPS middle schools. In some cases, the elementary schools were the designated DCPS feeder schools (indicated as bolded and italicized) but they could have been other DCPS or public charter elementary schools as well. An example of how to read this table is seven 6th graders at Cardozo EC attended Seaton ES as 5th graders the prior school year, and 21 6th graders at Cardozo attended other elementary schools (these schools were grouped into an "other" category because each school had 5 or less students and had to be combined for confidentiality purposes). No data available refers to not knowing what the previous school was in 5th grade either because the 6th graders were new public school students in SY2013-14 or because of data matching error.

Source: OSSE student-level data matched between SY2013-14 and SY2012-13

Notes: Data includes only those students who were in 6th grade in SY2013-14. 6th graders attending elementary/middle school education campuses were excluded from the analysis. Elementary schools bolded and italicized indicate official DCPS designated elementary school feeders for the indicated middle school. "No data available on school attended as 5th graders" in the SY2012-13 column means that the 6th grader could not be matched to an attended school in 5th grade. This could be because either the students were new to the DC public education system in SY2013-14 in 6th grade, that they were not enrolled in DCPS or public charter schools in SY2012-13, or that there is administrative matching error. "Other" in the SY2012-13 column refers to the number of students attending more than one DCPS or public charter school. These schools could not be displayed for confidentiality purposes because the number of students was less than or equal to 5 students.
